

- +5VDC Adjustment Instructions**
1. Connect AC1, AC2 and FG
  2. Power on and test +5VDC | Reading should be between 4.8 and 5.0 VDC
  3. Power off and connect +12VDC, +5VDC, Ground and -5VDC if necessary
  4. Power on and adjust +5VDC to between 4.8 and 5.0 VDC

Not all boards use all connections. Check your boards manual.  
 Not all harnesses have all wires connected, you may need to solder in additional wires to accommodate your needs.
